PREFACE

This part of Volume I presents statistics on the general characteristics of dwelling units for Alaska, Hawaii, Puerto Rico, and the Virgin Islands of the United States, as well as their constituent subdivisions including standard metropolitan areas, counties, municipalities, judicial divisions, and urban places. The data are based on tabulations from the 1950 Census of Housing, taken as of April 1, 1950. Authorization for the 1950 Census of Housing as part of the decennial census was provided by the Housing Act of 1949. This act, which was approved July 15, 1949, provided that "The Director of the Census is authorized and directed to take a census of housing in each State, the District of Columbia, Hawaii, Puerto Rico, the Virgin Islands, and Alaska, in the year 1950 and decennially thereafter in conjunction with, at the same time, and as a part of the population inquiry of the decennial census in order to provide information concerning the number, characteristics (including utilities and equipment), and geographical distribution of dwelling units in the United States."

Volume I, *General Characteristics*, contains data on practically all subjects enumerated in the 1950 Census of Housing. Chapters in this volume were published first as a series of bulletins, Series H–A. Bulletins were published for the United States, each State and the District of Columbia, Alaska, Hawaii, Puerto Rico, and the Virgin Islands of the United States. Statistics in the United States Summary are summarizations or compilations of data from the individual State chapters.

The materials presented here were prepared under the direction of Howard G. Brunsman, Chief, Population and Housing Division, Wayne F. Daugherty, Assistant Chief for Housing, and Robert B. Voight, Assistant Chief for Operations, with the assistance of Edwin D. Goldfield, Program Coordinator. They were prepared by Joel Williams, Chief, Territories and Possessions Section, assisted by Laura L. Heriot and Mildred Swearingin. The compilation of the statistics was under the supervision of Morton A. Meyer and Milton D. Lieberman, assisted by Sigmund Schor, Sidney Forman, and Juanita A. Wright. The technical editorial work and planning were under the supervision of Mildred M. Russell, assisted by Dorothy M. Belzer.

The collection of the information on which these statistics are based was under the direction of Lowell T. Galt, then Chief, Field Division, with the assistance of Jack B. Robertson, John M. Bell, Leon S. Geoffrey, and Alfred I. Jacobs. The geographic work was under the direction of Clarence E. Batschelet, Chief, Geography Division. The tabulations were under the direction of C. F. Van Aken, Chief, Machine Tabulation Division, with the assistance of Ralph E. Mullendore and Betty S. Mitchell. Robert H. Brooks of the Administrative Service Division was responsible for printing arrangements. Other members of the staff have made significant contributions to the conduct of the housing census and to the materials presented in this volume.

In addition to those of the present staff, important contributions to the general planning of the 1950 Census were made by the late J. C. Capt, Director of the Census until his retirement on August 17, 1949, and Dr. Philip M. Hauser, Acting Director until March 9, 1950.

June 1953.

U. S. CENSUS OF HOUSING: 1950

Volume

I General Characteristics (comprising Series H–A bulletins)
II Nonfarm Housing Characteristics (comprising Series H–B bulletins)
III Farm Housing Characteristics
IV Residential Financing
V Block Statistics (comprising Series H–E bulletins)
Housing statistics for census tracts are included in Population Series P–D bulletins.

U. S. CENSUS OF POPULATION: 1950

Volume

I Number of Inhabitants (comprising Series P–A bulletins)
II Characteristics of the Population (comprising Series P–A, P–B, and P–C bulletins)
III Census Tract Statistics (comprising Series P–D bulletins)
IV Special Reports (comprising Series P–E bulletins): Employment Characteristics, Occupational and Industrial Characteristics, Characteristics of Families, Marital Status, Institutional Population, Nativity and Parentage, Nonwhite Population by Race, Persons of Spanish Surname, Puerto Ricans in Continental United States, State of Birth, Mobility of the Population, Characteristics by Size of Place, Education, Fertility.

HOUSING VOLUME I

This volume comprises 7 parts, with the States arranged alphabetically and followed by Alaska, Hawaii, Puerto Rico, and the Virgin Islands of the United States. Data for the United States and for each State (Territory or possession) are presented as separate chapters. The areas included in each part, by chapter number, are as follows:

Part 1
1. United States Summary

Part 2
2. Alabama
3. Arizona
4. Arkansas
5. California
6. Colorado
7. Connecticut
8. Delaware
9. District of Columbia
10. Florida
11. Georgia

Part 3
12. Idaho
13. Illinois
14. Indiana
15. Iowa
16. Kansas
17. Kentucky
18. Louisiana

Part 3—Continued
19. Maine
20. Maryland

TABLES

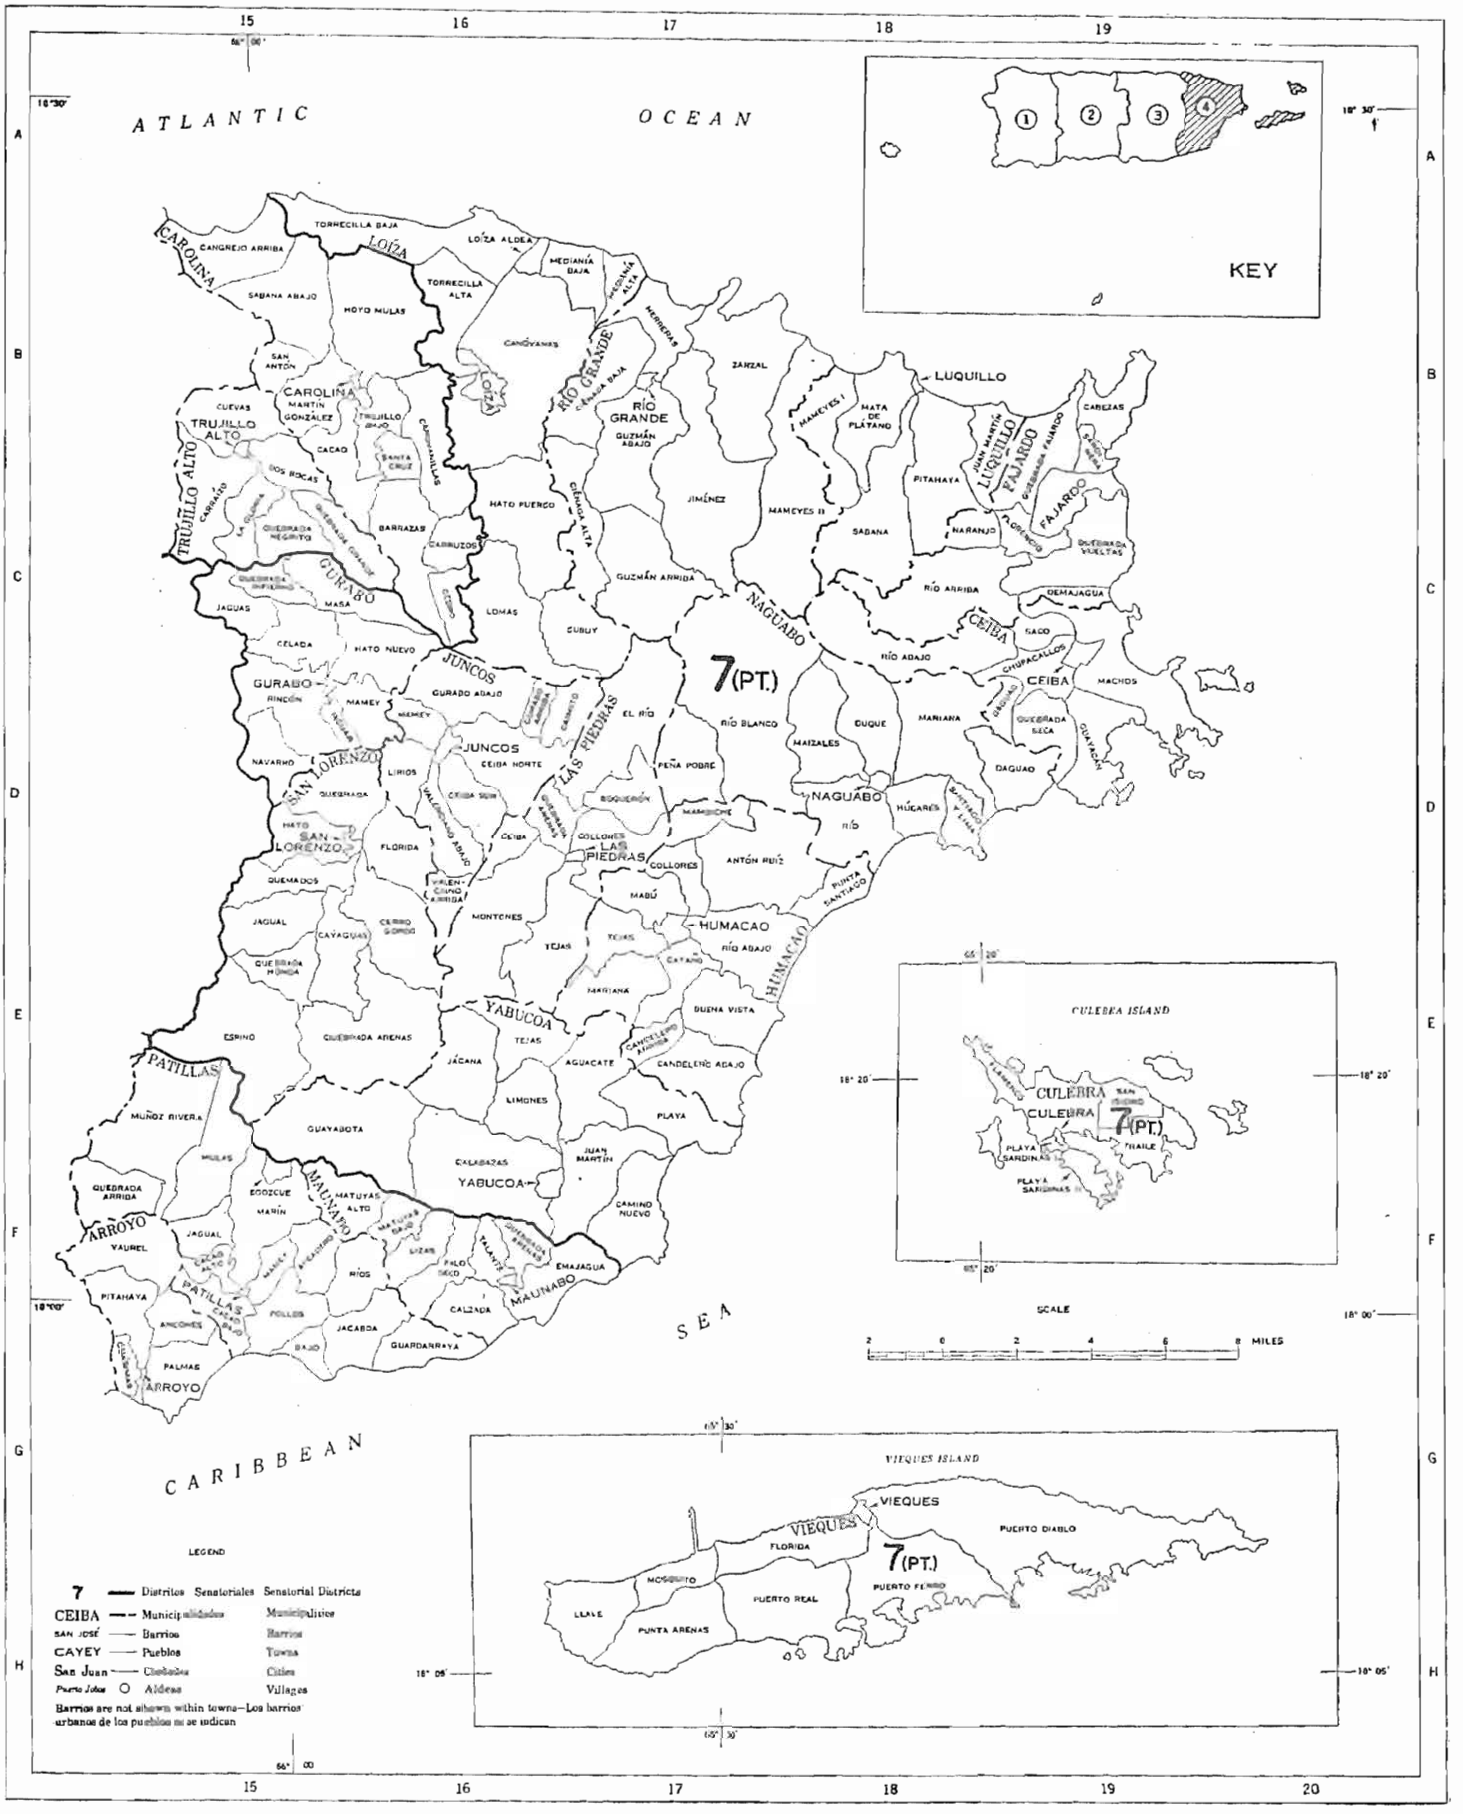

Table	Page
1.—Occupancy, tenure, and color of household head, for Puerto Rico, urban and rural: 1950	17
2.—Occupied dwelling units by tenure and color of household head and population per occupied dwelling unit, for Puerto Rico, urban and rural: 1950 and 1940	17
3.—Dwelling units by number of dwelling units in structure and occupancy, for Puerto Rico, urban and rural: 1950	18
4.—Dwelling units by year built, for Puerto Rico, urban and rural: 1950	18
5.—Condition and plumbing facilities by occupancy, for Puerto Rico, urban and rural: 1950	19
6.—Plumbing facilities for all dwelling units, for Puerto Rico, urban and rural: 1950	20
7.—Dwelling units by number of rooms and occupancy, for Puerto Rico, urban and rural: 1950	20
8.—Dwelling units by number of persons and tenure, for Puerto Rico, urban and rural: 1950	21
9.—Dwelling units by persons per room and tenure, for Puerto Rico, urban and rural: 1950	21
10.—Exterior material, electric lighting, and refrigeration equipment, for Puerto Rico, urban and rural: 1950	22
11.—Contract monthly rent of nonfarm renter-occupied and selected vacant dwelling units, for Puerto Rico, urban and rural: 1950	22
12.—Value and monthly contract land rental of nonfarm owner-occupied dwelling units, and value of selected vacant dwelling units, for Puerto Rico, urban and rural: 1950	23
13.—Occupancy characteristics, number of dwelling units in structure, and plumbing facilities, for standard metropolitan areas and places of 2,500 or more: 1950	24
14.—Condition and plumbing facilities, for standard metropolitan areas and places of 2,500 or more: 1950	28
15.—Dwelling units by number of rooms, number of persons, and persons per room, for standard metropolitan areas and urban places of 2,500 or more: 1950	32
16.—Year built, exterior material, electric lighting, and refrigeration equipment, for standard metropolitan areas and places of 2,500 or more: 1950	36
17.—Financial characteristics of urban and rural-nonfarm dwelling units, for standard metropolitan areas and places of 2,500 or more: 1950	38
18.—Characteristics of dwelling units, for places of 1,000 to 2,500: 1950	42
19.—Occupancy characteristics, number of dwelling units in structure, number of rooms, condition and plumbing facilities, and number of persons, for municipalities: 1950	43
20.—Plumbing facilities, year built, exterior material, electric lighting, and refrigeration equipment, for municipalities: 1950	49
21.—Occupancy characteristics, number of dwelling units in structure, number of rooms, condition and plumbing facilities, and number of persons in rural dwelling units, for municipalities: 1950	55
22.—Plumbing facilities, year built, exterior material, electric lighting, and refrigeration equipment of rural dwelling units, for municipalities: 1950	61
23.- Financial characteristics of urban and rural-nonfarm dwelling units, for municipalities: 1950	67

GENERAL CHARACTERISTICS

GENERAL

Content

This report constitutes a chapter of Volume I of the Housing reports. Volume I presents basic statistics relating to practically all subjects for which information was collected in the Census of Housing, taken as of April 1, 1950. The dwelling unit is the reporting unit in this volume.

Statistics are presented for Puerto Rico by residence (urban, rural nonfarm, and rural farm) and for the following types of areas within the island: standard metropolitan areas, municipalities, urban places, places of 1,000 to 2,500 inhabitants, and rural portions of municipalities.

Characteristics are not shown if the base contains fewer than three dwelling units in order to avoid disclosure of information for individual units.

Comparability With 1940 Census of Housing

In general, the scope of the subject matter covered in the 1950 Census of Housing is the same as in the 1940 Census. Some items, however, were enumerated in one census but not in the other. Information on tenure of land for owner-occupied dwellings and on year built was collected in 1950 but not in 1940. On the other hand, information was collected in 1940 on radios and mortgage status, but not in 1950. Moreover, some information for structures was included in the 1940 Housing reports, while the 1950 data have been tabulated only for dwelling units.

Besides these modifications in scope, there have been several changes in concepts and definitions from the 1940 Census. Departures from the 1940 procedures were adopted after consultation with users of housing census data in order to increase the usefulness of the statistics, even though it was recognized that comparability might be adversely affected in some cases. Changes in definitions and procedures are described in the section on "Definitions and explanations." For most of the subjects the 1940 and 1950 data are comparable. In some cases only rough comparisons are possible and these should be made with caution.

Housing Reports

Five volumes will contain the principal findings of the 1950 Census of Housing. Volume I, *General Characteristics*, is the basic publication. This volume contains data on practically all housing items enumerated in the census, presented as a separate chapter for continental United States, each State, the District of Columbia, Alaska, Hawaii, Puerto Rico, and the Virgin Islands of the United States. Each of the chapters is available as a separate bulletin (Series H–A). Volumes II through V of the Housing Reports are limited to data for continental United States.

Population Reports

The major portion of the information compiled from the Census of Population of 1950 will appear in Volume II, *Characteristics of the Population*. This final volume is first appearing in the form of three series of bulletins: Series P–A, "Number of Inhabitants"; Series P–B, "General Characteristics"; and Series P–C, "Detailed Characteristics."

CARACTERISTICAS GENERALES

GENERAL

Contenido

Este boletín constituye un capítulo del Volumen I sobre Viviendas. El Volumen I presenta estadísticas básicas sobre casi todos los tópicos enumerados en el Censo de Viviendas tomado el 1 de abril de 1950. La vivienda es la unidad informada en este volumen.

Se presentan estadísticas para Puerto Rico por residencia (urbana, rural no agrícola y rural agrícola) y para las siguientes clases de áreas de la isla: áreas metropolitanas stándard, municipios, lugares urbanos, lugares de 1,000 a 2,500 habitantes, y la parte rural de los municipios.

Con el propósito de no divulgar información acerca de unidades individuales no se informan las características si la base es menos de 3 unidades.

Comparabilidad con Censo de Viviendas del 1940

En general, el alcance de la materia incluída en el Censo de Viviendas de 1950 es igual al del Censo de 1940. Algunos ítemes, sin embargo, no fueron enumerados en ambos censos. Se obtuvo información en 1950 sobre la tenencia del solar para viviendas ocupadas por los dueños y el año construído, pero no en 1940. En cambio, en 1940 se obtuvo información sobre radios y si la vivienda estaba hipotecada, pero no en 1950. También, se incluyó información sobre estructuras en los informes para el 1940, mientras que en 1950 se tabularon solamente datos sobre viviendas.

Además de estas modificaciones en el alcance, han habido varios cambios en los conceptos y las definiciones del Censo de 1940. Dichos cambios en los procedimientos de 1940 fueron adaptados después de consultas con personas que usan los datos sobre viviendas con el propósito de aumentar la utilidad de las estadísticas, aún cuando se reconocía que afectaría adversamente la comparabilidad en algunos casos. Se discuten los cambios en definiciones y procedimientos en la sección "Definiciones y explicaciones." Para la mayoría de los tópicos, los datos para el 1950 y el 1940 son comparables. En algunos casos se pueden hacer solamente aproximaciones y éstos se deben hacer con mucho cuidado.

Informes Sobre Viviendas

Los resultados más importantes del Censo de Viviendas de 1950 se publicarán en cinco volúmenes. La publicación básica es el Volumen I, *Características Generales*. Este volumen contiene casi todos los ítemes enumerados en el Censo, publicados como capítulos por separado, para los Estados Unidos continentales, cada estado, el Distrito de Columbia, Alaska, Hawaii, Puerto Rico, y las Islas Vírgenes de los Estados Unidos. Cada capítulo estará disponible por separado (Serie H–A). Los Volúmenes II a V contienen datos para los Estados Unidos continentales solamente.

Informes Sobre Población

La mayor parte de la información compilada del Censo de Población de 1950 se publicará en el Volumen II, *Características de la Población*. Este volumen se está publicando como tres series de informes para cada área: la serie P–A, "Número de Habitantes"; serie P–B "Características Generales"; y serie P–C, "Características Detallades."

Availability of Unpublished Data

Practically all of the housing data that were tabulated are published in this report. Unpublished statistics can be made available, however, for the cost of transcription or reproduction. An estimate of the cost of providing unpublished data will be made upon request to the Director, Bureau of the Census, Washington 25, D. C.

Maps

A map of Puerto Rico showing the outlines of municipalities, and the location of cities, towns, and villages, is included in this, report.

DEFINITIONS AND EXPLANATIONS

Urban and Rural Residence

As in prior censuses the housing data for the 1950 Census of Puerto Rico have been classified by urban and rural residence. Urban housing comprises all dwelling units in places of 2,500 inhabitants or more; the remaining dwelling units are classified as rural. The rural classification comprises a variety of residences which range from isolated homes in the open country to dwelling units in places having nearly 2,500 inhabitants.

Farm and Nonfarm Residence

In the 1950 Census, the enumerators were specifically instructed to ask the question "Is this dwelling on (1) a tract of land of 3 cuerdas [1] or more; (2) a plot of less than 3 cuerdas but more than one-quarter cuerda; (3) other lot (less than one-quarter cuerda)?"

In rural areas dwelling units are classified into rural-farm units which comprise all dwelling units on tracts of land of three or more cuerdas, and rural-nonfarm units which are the remaining rural units. In most areas, virtually all farm housing is in rural areas. Housing characteristics are shown in this report for rural-farm dwelling units instead of for all farm units.

There is a difference between the farm-nonfarm classification for continental United States and that for Puerto Rico. In the United States the classifications are based largely on the answers to the question "Is this house on a farm?"; whereas in Puerto Rico the categories are based on the size of the tract on which the dwelling is located, as discussed above.

Place

The term "place" refers to a concentration of population regardless of legally prescribed limits, powers or functions. Because all places in Puerto Rico are unincorporated, the Bureau of the Census has acknowledged locally delineated boundaries. Urban places are those cities, towns, or villages which have 2,500 inhabitants or more.

Standard Metropolitan Areas

It has long been recognized that, for many types of social and economic analysis, it is necessary to consider the city and its surrounding area in which the activities form an integrated social and economic system. Prior to the 1950 Census, areas of this type had been defined in somewhat different ways by various agencies. The usefulness of data published for these areas was limited by the lack of comparability.

Accordingly, the Bureau of the Census in cooperation with a number of other Federal agencies, under the leadership of the Bureau of the Budget, established the "standard metropolitan area" so that a wide variety of statistical data might be presented on a uniform basis.

[1] A "cuerda" is a local measure of land area and represents approximately 0.97 acres.

Disponibilidad de Datos Inéditos

Este boletín presenta casi todas las estadísticas sobre viviendas que se han tabulado. Las estadísticas no publicadas pueden obtenerse siempre que se sufrague el costo de transcribirlas o reproducirlas. Un cálculo del costo de preparación de dichos datos puede obtenerse si se dirige una solicitud al Director, Bureau of the Census, Washington 25, D. C.

Mapa

Se incluye en este informe un mapa de Puerto Rico en el cual se diseñan los límites de los municipios y la ubicación de las ciudades, pueblos, y aldeas.

DEFINICIONES Y EXPLICACIONES

Residencia Urbana y Rural

Como en los censos anteriores, los datos sobre viviendas para el Censo de 1950 de Puerto Rico han sido clasificados según residencia, en urbana y rural. Viviendas urbanas comprenden todas las viviendas en lugares de 2,500 o más habitantes. Las demás viviendas se clasifican rurales. La clasificación rural comprende una variedad de residencias, de una casa aislada en el campo abierto a viviendas en lugares de casi 2,500 habitantes.

Residencia Agrícola y no Agrícola

En el Censo de 1950, se le instruyó a los enumeradores que hicieran la pregunta "¿Está la vivienda situada en (1) Un predio de terreno de 3 o más cuerdas; [1] (2) Una parcela de un cuarto de cuerda pero menor de 3 cuerdas; [1] (3) Otra parcela (menos de un cuarto)?"

En las áreas rurales las viviendas se clasifican en rurales agrícolas que comprenden todas las viviendas situadas en predios de terreno de 3 o más cuerdas, y las otras viviendas rurales en rurales no agrícolas. En la mayoría de las áreas, casi todas las viviendas agrícolas están en áreas rurales. Así es que las características sobre viviendas se presentan en este informe para viviendas rurales, en vez de viviendas rurales agrícolas.

La clasificación agrícola y no agrícola para los Estados Unidos continentales difiere de esa para Puerto Rico. En los Estados Unidos se basan en las respuestas a la pregunta "Is this house on a farm?" (¿Está esta casa situada en una finca?) mientras que en Puerto Rico las categorías se basan en el tamaño del predio de terreno en que está situada la vivienda de acuerdo con la discusión más arriba.

Lugar

En Puerto Rico, el término "place" (lugar) se aplica a una concentración de población localmente designada una ciudad, un pueblo o una aldea. Ciudades, pueblos, o aldeas con 2,500 o más habitantes se designan "lugares urbanos."

Áreas Metropolitanas Stándard

Se ha reconocido por mucho tiempo que para los estudios sociales e económicos, es necesario considerar como entidad toda la ciudad y los alrededores cuyas actividades forman un sistema social y económico integrado. Anterior al Censo de 1950, distintas agencias habían definido áreas de este tipo en varios maneras. La utilidad de datos publicados para cualquier de estas áreas estaba limitada por falta de comparabilidad.

Por consiguiente, el Negociado del Censo en cooperación con un número de agencias federales, bajo la dirección del Negociado del Presupuesto, estableció el "standard metropolitan area" (área metropolitana stándard), como una base uniforme para la presentación de una variedad vasta de datos estadísticos.

[1] Una cuerda es una medida de terreno local y representa aproximadament 0.97 acres.

Definition.—A standard metropolitan area is a municipality or group of contiguous municipalities which contains at least one city of 50,000 inhabitants or more. Municipalities contiguous to the one containing such a city are included in a standard metropolitan area if, according to certain criteria, they are essentially metropolitan in character and socially and economically integrated with the central city.

Standard metropolitan areas and their constituent parts.—The three standard metropolitan areas in Puerto Rico and their constituent parts are as follows:

1. Mayagüez—Mayagüez Municipality.
2. Ponce—Ponce Municipality.
3. San Juan–Río Piedras—Bayamón, Cataño, Guaynabo, Río Piedras, and San Juan Municipalities.

Dwelling Unit

In general, a dwelling unit is a group of rooms or a single room occupied, or intended for occupancy, as separate living quarters by a family or other group of persons living together or by a person living alone.

Ordinarily, a dwelling unit is a house, an apartment, or a flat. A dwelling unit may be located in a structure devoted to business or other nonresidential use, such as quarters in a warehouse where the watchman lives or a merchant's quarters in back of his shop. Boats, tents, and railroad cars, when occupied as living quarters, are included in the dwelling unit inventory.

A group of rooms, occupied or intended for occupancy as separate living quarters, is a dwelling unit if it has separate cooking equipment or a separate entrance. A single room, occupied or intended for occupancy as separate living quarters, is a dwelling unit if it has separate cooking equipment or if it constitutes the only living quarters in the structure. Each apartment in a regular apartment house is a dwelling unit even though it may not have separate cooking equipment. Apartments in residential hotels are dwelling units if they have separate cooking equipment or consist of two rooms or more.

Living quarters of the following types are not included in the dwelling unit inventory: rooming houses with five lodgers or more, transient accommodations (hotels, etc., predominantly for transients), and barracks for workers (sugar mill, construction, etc.). Living quarters in institutions (for delinquent or dependent children, for handicapped persons, for the aged, for prisoners, etc.), general hospitals, and military installations are likewise excluded from the dwelling unit inventory except for dwelling units in buildings containing only family quarters for staff members.

The count of occupied dwelling units in the 1950 Census may be considered comparable with the count in the 1940 Census. Even though some living quarters were classified as separate dwelling units by one definition and not by the other, the over-all effect of these differences is believed to be small. In the 1940 Census, a dwelling unit was defined as the living quarters occupied by one household. A household consisted of a family or other group of persons living together with common housekeeping arrangements, or a person living entirely alone. The enumerator was not explicitly instructed to define living quarters as dwelling units on the basis of cooking equipment or separate entrance. Further, in 1950, living quarters with five lodgers or more were not included in the dwelling unit count.

One change in the instructions to enumerators tended to reduce the dwelling unit count between 1940 and 1950. In 1940, a servant who lived in a structure completely separate from that of her employer was considered a separate household. On the other hand, in 1950 this servant was enumerated as part of the employer's household unless she had separate cooking equipment.

237473—53——2

Definición.—Un área metropolitana stándard es un municipio o un grupo de municipios contiguos abarcando a lo menos una ciudad de 50,000 o más habitantes. Además del municipio o municipios que abarcan tal ciudad o ciudades se incluyen los municipios contiguos al área metropolitana stándard si, bajo ciertos criterios, son de carácter esencialmente metropolitanas y social y ecónomicamente integrados con la ciudad central.

Las áreas metropolitanas stándard y sus partes componentes.—Las tres áreas metropolitanas stándard y sus partes componentes son las siguientes:

1. Mayagüez—Municipio de Mayagüez.
2. Ponce—Municipio de Ponce.
3. San Juan–Río Piedras—Municipios de Bayamón, Cataño, Guaynabo, Río Piedras, y San Juan.

La Vivienda

Por lo general, una vivienda es un grupo de cuartos o un solo cuarto ocupado o por ocupar como domicilio independiente por una familia o por un grupo de personas que viven juntas o por una persona que vive sola.

Por lo regular, una vivienda es una casa, o un apartamiento. Puede haber una vivienda en un edificio dedicado principalmente a negocios o a cualquier otro propósito no residencial, tal como una habitación para el guardián de un almacén, la vivienda de un comerciante detrás de su tienda. Locales tales como botes, tiendas de campaña o vagones de ferrocarril, si efectivamente están ocupados con fines residenciales, también se incluyen en el recuento de viviendas.

Un grupo de cuartos, ocupado o por ocupar como domicilio independiente es una vivienda si tiene facilidades de cocina independientes o entrada independiente. Un solo cuarto, ocupado o por ocupar como domicilio independiente, es una vivienda si tiene facilidades de cocina independientes o si constituye la única vivienda en el edificio. Cada apartamiento en una casa de apartamientos es una vivienda aunque no tenga facilidades independientes. Apartamientos en hoteles residenciales son viviendas si tienen facilidades de cocina independientes o consisten de dos o más cuartos.

Unidades de las siguientes clases no se incluyen en el inventario de viviendas: casas de hospedaje para cinco o más alojados, habitaciones destinadas para transeúntes (hoteles, etc.) y dormitorios para trabajadores (centrales de azúcar, construcción, etc.). También se excluyen del inventario de viviendas las viviendas en instituciones (para niños huérfanos o desamparados, asilos para inválidos, ancianos, o prisioneros, etc.), hospitales, y cuarteles militares, a menos que sean viviendas en edificios para empleados y sus familias.

El recuento de viviendas en el Censo de 1950 puede compararse con el recuento del 1940. Aunque algunas viviendas fueron clasificadas como viviendas según una definición y no según la otra, la diferencia es muy pequeña. En el Censo del 1940, se definía una vivienda como los cuartos ocupados, o por ocupar, por una sola familia. Una vivienda consistía de una familia u otro grupo de personas viviendo juntas y compartiendo las mismas facilidades o de una persona que vivía sola. No se le instruyó explícitamente al enumerador que debía clasificar cuartos como viviendas si tenían facilidades de cocina o entrada independiente. También, en 1950 no se incluyeron unidades con 5 o más alojados en el recuento de viviendas.

Un cambio en las instrucciones a los enumeradores contribuyó reducir el número de viviendas entre 1940 y 1950. En 1940, toda sirvienta que vivía en una estructura completamente separada de la del dueño se consideró otra familia separada. En cambio, en 1950 tal sirvienta se enumeró como parte de la familia del dueño a menos que tuviese facilidades de cocina separadas.

Occupancy Characteristics

Occupied dwelling units.—A dwelling unit is occupied if a person or group of persons was living in it at the time of enumeration or if the occupants were only temporarily absent, as for example, on vacation. However, a dwelling unit occupied at the time of enumeration by nonresidents is not classified as occupied but as a "nonresident" dwelling unit.

Occupied dwelling units and households.—A household consists of those persons who live in a dwelling unit; by definition, therefore, the count of occupied dwelling units is the same as the count of households. However, there may be small differences between these counts in the Housing and the Population reports because the data were processed independently.

Population in dwelling units.—The count of the population in dwelling units represents the population in living quarters which are classified as dwelling units and therefore excludes the population in institutions and other quasi households. This count was used in computing the 1950 "population per occupied dwelling unit." In 1940, however, population per occupied dwelling unit was obtained by dividing the total population by the number of occupied dwelling units. Thus the 1950 and the 1940 figures for population per occupied dwelling unit are not strictly comparable. The differences are negligible, however, except in those areas where there is an appreciable resident population in institutions, large rooming houses, dormitories, or other quarters not classified as dwelling units.

Tenure.—A dwelling unit is "owner-occupied" if the owner is one of the persons living in the unit even if the dwelling unit was not fully paid for or had a mortgage on it. When the owner of the unit was a member of the household but was temporarily away from home, as in the case of military service or temporary employment away from home, the unit was still classified as "owner-occupied."

Owner-occupied dwelling units are further classified according to the tenure of the land on which the dwelling is situated into "dwelling and land owned" and "dwelling owned, land rented."

All occupied dwelling units that are not "owner-occupied" were classified as "renter-occupied" whether or not any money rent was paid for the living quarters. Rent-free units and units received in payment for services performed are thus included with the renter-occupied units.

Color of household head.—Occupied dwelling units are classified by the color of the head of the household according to the definition used in the 1950 Census of Population. The term "color" refers to the division of households into two groups, white and nonwhite. The group designated as "nonwhite" consists of Negroes and other nonwhite races.

Number of persons.—All persons enumerated in the Population Census as members of the household were counted in determining the number of persons who live in the dwelling unit. Lodgers, wards, and resident employees who share the living quarters of the household head are included in the household in addition to family members.

Median number of persons.—The median number of persons per occupied dwelling unit is the theoretical value which divides the dwelling units equally, one-half having more persons and one-half having fewer persons than the median. In the computation of the median, a continuous distribution was assumed. For example, when the median is in the 3-person group, the lower and upper limits of the group were assumed to be 2.5 and 3.5, respectively.

Tenencia

Viviendas ocupadas.—Una vivienda estaba ocupada si en la fecha de la enumeración vivía en ella una persona o grupo de personas, o si los ocupantes estaban temporalmente ausentes, como por ejemplo de vacaciones. Sin embargo, una vivienda ocupada en la fecha de la enumeración por personas no residentes se clasificaba como vivienda "nonresident" (no residente) y no como vivienda ocupada.

Viviendas ocupadas y familias.—Una familia consiste de esas personas que viven en una vivienda; así es que, según la definición, el recuento de viviendas ocupadas es igual al recuento de familias. Sin embargo, pueden haber pequeñas diferencias entre los recuentos de los informes sobre viviendas y sobre población porque las estadísticas fueron sometidas a procedimientos independientes.

Población en las viviendas.—El recuento de la población en las viviendas representa la población en los cuartos que se clasifican como viviendas y por esto excluye la población en instituciones y otras viviendas de cuasi-familias. Este recuento se usó en 1950 al computar la "population per occupied dwelling unit" (población por cada vivienda ocupada). En 1940, sin embargo, la población por cada vivienda ocupada se obtuvo dividiendo la población total por el número de viviendas ocupadas. Así es que las cifras de "population per occupied dwelling unit" de 1950 y 1940 no son estrictamente comparables. Las diferencias son insignificantes, excepto en esas áreas donde hay un número apreciable de residentes en instituciones, casas de huéspedes, dormitorios, y otras unidades no clasificadas como viviendas.

Tenencia.—Una vivienda es "owner-occupied" (propiedad del ocupante) si pertenece a alguna persona que vive en la vivienda. No importa si no se ha pagado la casa completamente o si está hipotecada. Si el dueño de la vivienda era miembro de la familia pero estaba temporalmente ausente, en servicio militar o empleado temporalmente fuera de su lugar habitual de residencia, la vivienda se clasificó como "owner-occupied" (propiedad del ocupante).

Las viviendas propiedad del ocupante también se clasificaron de acuerdo con la tenencia del solar en que estaba construída la vivienda, en "dwelling and land owned" (vivienda y solar de propiedad) y "dwelling owned, land rented" (vivienda de propiedad, solar de no propiedad).

Todas las viviendas ocupadas que no son "owner-occupied" (propiedad del ocupante) fueron clasificadas como "renter-occupied" (viviendas ocupadas por inquilinos) no importaba si el ocupante pagaba o no pagaba alquiler para la vivienda. Así es que se incluyen con las alquiladas las viviendas ocupadas sin pagar alquiler y viviendas ocupadas como parte de la remuneración.

Color del jefe de la vivienda.—Las viviendas ocupadas se clasifican según el color del jefe de la familia de acuerdo con la definición usada en el Censo de Población de 1950. El término "color" (color) se refiere a la división de las familias en dos grupos "white" (blancos) y "nonwhite" (no blancos). El grupo designado "nonwhite" incluye negros y otras razas no blancas.

Número de personas.—Al determinar el número de personas que viven en cada vivienda, se incluyeron todas las personas enumeradas en el Censo de Población como miembros de la familia. Se incluyen con la familia a los huéspedes, los pupilos, y empleados que comparten la vivienda del jefe de la familia.

Número mediano de personas.—El número mediano de personas por cada vivienda ocupada es el valor teórico que divide las viviendas en dos partes iguales, una mitad con más personas y la otra mitad con menos personas que la mediana. En la computación de la mediana se asumió una distribución contínua. Por ejemplo, cuando la mediana cae en el grupo de 3-personas, los límites superiores e inferiores del grupo se asumen ser 2.5 y 3.5, respectivamente.

Persons per room.—The number of persons per room was computed by dividing the number of persons by the number of rooms in the dwelling unit. The ratio was computed separately for each occupied dwelling unit.

Nonresident dwelling units.—A nonresident dwelling unit is a unit which is occupied temporarily by persons who usually live elsewhere. Nonresident units are not included with occupied dwelling units. They are presented as a separate group in tables 1, 13, 19, and 22, and are included in the "all other" category or with vacant units, not for rent or sale, in the remaining tables.

Vacant dwelling units.—A dwelling unit is vacant if no persons were living in it at the time of enumeration, except when its occupants were temporarily absent. Dilapidated vacant dwelling units were included if they were intended for occupancy as living quarters. New units not yet occupied were enumerated as vacant dwelling units if construction had proceeded to the extent that all the exterior windows and doors were installed and final usable floors were in place. Otherwise, potential units under construction were not enumerated.

The enumeration of vacant units in the 1950 Census of Housing is not entirely comparable with the procedure used in the 1940 Census. Counts of total vacant units in 1950 are considered more inclusive than in 1940. In 1940, vacant units were enumerated only if they were habitable; vacant units which were uninhabitable and beyond repair were omitted. In 1950, all vacant units, whether or not dilapidated, were included if they were intended for occupancy as living quarters.

The 1950 category "for rent" consists of vacant units offered for rent as well as those being offered for rent and for sale. The "for sale only" group is limited to those for sale only. "Not for rent or sale" includes units already rented or sold but not yet occupied, and units being held off the market for other reasons.

Not dilapidated vacant units, for rent or sale (available vacant units).—This category provides a measure of dwelling units on the housing market in April 1950. It does not include any dilapidated or any vacant units which are already rented or sold or which are being held off the market for other reasons. No comparable classification was established in 1940.

Structural Characteristics

Number of dwelling units in structure.—These statistics are based on the number of units classified by the number of dwelling units in the structure in which they are located rather than on the number of residential structures. A structure either stands by itself with open space on all sides or has vertical walls dividing it from all other structures.

There are some differences between the 1950 and 1940 classifications. In the 1950 tabulations, structures with business were not distinguished from structures without business. In 1940, such distinction was made for units in structures with one to four dwelling units. The number of structures with business is generally small, so that for most practical purposes this difference does not affect the comparability of the data. The term "family" in the 1940 type of structure categories is equivalent to the "dwelling unit" in the 1950 categories. Further, two single-family attached dwellings were considered as one structure with two dwelling units in 1940, but as two structures with one dwelling unit each in 1950.

Number of rooms.—All rooms which are used, or are suitable for use, as living quarters are counted in determining the number

Personas por cuarto.—El número de personas por cuarto se computó dividiendo el número de personas por el número de cuartos en la vivienda. La proporción se calculó separadamente para cada vivienda ocupada.

Viviendas de personas no residentes.—Una vivienda ocupada por personas no residentes es una vivienda ocupada temporalmente por personas que viven habitualmente en otro lugar. No se incluyen las viviendas de personas no residentes con las viviendas ocupadas. Se presentan en las tablas 1, 13, 19, y 22 como un grupo por separado, y se incluyen en la categoría "all other" (otras) o "with vacant units, not for rent or sale" (viviendas desocupadas ni para alquiler ni para venta) en las otras tablas.

Viviendas desocupadas.—Una vivienda está desocupada si en la fecha de la enumeración nadie vivía en ella, a menos que los ocupantes estuvieran ausentes temporalmente. Se incluyeron viviendas deterioradas desocupadas solamente si se destinaban a ser ocupadas como viviendas. Viviendas en construcción se enumeraron como viviendas desocupadas, si la construcción había progresado hasta tal punto que se habían instalado las ventanas y puertas exteriores y los pisos estaban colocados. De lo contrario, viviendas potenciales en construcción no fueron enumeradas.

La enumeración de viviendas desocupadas en el Censo de Viviendas de 1950 no es estrictamente comparable con el procedimiento usado en el Censo de 1940. Se considera que el recuento de viviendas desocupadas en 1950 es más inclusivo que el de 1940. En 1940, se enumeraron viviendas desocupadas solamente si eran habitables; se omitieron viviendas desocupadas que eran inhabitables y en tan mal estado que sería imposible repararlas. En 1950, se incluyó toda vivienda desocupada, deteriorada o no, si se destinaba como vivienda.

La categoría del 1950 "for rent" (para alquiler) consiste de las viviendas desocupadas para alquiler como también esas que están "for rent or for sale" (para alquiler o para venta). Se limita el grupo "for sale only" (para venta solamente) a esas que están de venta solamente; "not for rent or sale" (ni para alquiler ni para venta) incluyendo viviendas que ya han sido alquiladas o vendidas pero aún están desocupadas y viviendas retenidas por el dueño debido a otras razones.

Viviendas no deterioradas para alquiler o para venta (viviendas desocupadas disponibles).—Esta categoría provee una medida de viviendas en el mercado en abril de 1950. No incluye viviendas deterioradas o desocupadas que ya han sido alquiladas o vendidas o retenidas por el dueño por cualquier razón. En 1940, no hubo tal clasificación.

Características Estructurales

Número de viviendas en el edificio.—Estas estadísticas se basan de acuerdo con el número de viviendas en el edificio en que están situadas y no en el número de edificios residenciales. Un edificio está construído con espacio abierto en todos lados o tiene paredes verticales que lo separan de otros edificios.

Las clasificaciones del 1950 difieren en algunos puntos de las de 1940. En las tabulaciones de 1950, no se distinguen los edificios con negocios de esos sin negocios. En 1940, se hizo esta distinción para edificios con 1 a 4 viviendas. Por lo general el número de edificios con negocios es pequeño así es que para propósitos prácticos esta diferencia no afecta la comparabilidad de los datos. El término "family" (familia) en las categorías del 1940 sobre tipo de edificio es equivalente a "dwelling-unit" (vivienda) en las categorías del 1950. También en 1940, se consideraron dos casas unidas como un solo edificio para dos familias, mientras que en 1950 se clasificaron como dos edificios con dos viviendas.

Número de cuartos.—Todos los cuartos que se usan, o están disponibles para uso como alojamiento, se cuentan al determi-

of rooms in the dwelling units. Included are kitchens, bedrooms, dining rooms, living rooms, and permanently enclosed sunporches of substantial size; finished basement rooms, recreation rooms, or other rooms used or suitable for use as living quarters; and rooms used for office purposes by a person living in the dwelling unit. A kitchenette or "half-room" which is partitioned off from floor to ceiling is counted as a separate room, but a combined kitchenette and dinette separated only by shelves or cabinets is counted as only one room. Not counted as rooms are bathrooms, strip or pullman kitchens, halls or foyers, alcoves, pantries, laundries, closets or storage space, unused basement rooms not suitable for living quarters, and rooms subleased for office or business purposes by a person or persons not living in the dwelling unit.

Year built.—The year the structure was built refers to the year in which the original construction was completed, not to the year in which any later remodeling, addition, reconstruction, or conversion may have taken place. "Year built" statistics are based on dwelling units classified by the date of the original construction of the structure in which they are located. The figures do not represent the number of dwelling units added to the inventory during a given period. They represent the number of units constructed during a given period plus the number created by conversions in structures originally built during the same period, minus the number destroyed in structures built during the period. Losses occur through demolition, fire, flood, disaster, and conversion to nonresidential use or to fewer dwelling units.

Condition and Plumbing Facilities

Condition and plumbing facilities as a combined item.—Both the condition of a dwelling unit and the type of plumbing facilities are considered measures of the quality of housing. These items have been combined into categories representing various levels of housing quality, ranging from the most desirable to the least desirable. Such comprehensive categories provide a more practical means of evaluating quality than is possible by the use of individual items. The statistics on the combination of condition and plumbing facilities are limited to dwelling units for which reports were made on all items.

The category "With private toilet and bath" includes those dwelling units with both a flush toilet and a bathtub or shower inside the structure for the exclusive use of the occupants of the unit. "With running water, lacking private toilet or bath" includes those dwelling units having running water in the structure, but lacking a private flush toilet or lacking a private bathtub or shower. "No running water" includes units with only piped running water outside the structure or with other sources of water supply, such as a hand pump.

In 1940, data for state of repair (condition) and plumbing facilities were not presented in combination.

Condition.—To measure condition, dwelling units were classified as "not dilapidated" or "dilapidated." A dwelling unit was reported as dilapidated when it had serious deficiencies, was rundown or neglected, or was of inadequate original construction, so that it did not provide adequate shelter or protection against the elements or endangered the safety of the occupants. A dwelling unit was reported as dilapidated if, because of either inadequate original construction or deterioration, it is below the generally accepted minimum standard for housing and should be torn down or extensively repaired or rebuilt.

The enumerator determined the condition of the dwelling unit on the basis of his own observation. He was instructed to appraise the condition of units uniformly, regardless of neighborhood. The enumerator was provided with detailed written instructions and with pictures illustrating the concepts "deterioration" and "inadequate original construction."

narse el número de cuartos en la vivienda. Se incluyen cocinas, dormitorios, comedores, salas, terrazas cubiertas de tamaño regular, sótanos, cuartos de desván, otros cuartos usados o adecuados para usarse como viviendas, y habitaciones usadas para oficinas por personas que viven en el mismo hogar. Se considera una cocina pequeña o "medio cuarto" como un cuarto separado si tiene una pared del piso al cielo raso pero la combinación de una cocina pequeña y un comedorcillo separado solamente por tablillas o gabinetes se cuenta como un solo cuarto. No se incluyen cuartos de baño, cocinitas, entradas, pasillos, alacenas, lavanderías, armarios, sótanos no usados o no habitables, y cuartos subalquilados para oficinas o propósitos comerciales a una persona o personas que no forman parte de la familia.

Año de construcción.—El año de construcción se refiere al año en que fué construído el edificio y no al año en que se hicieron adiciones, reconstrucciones o transformaciones. Las estadísticas sobre "year built" (año construído) se basan en las viviendas clasificadas de acuerdo con la fecha de construcción original del edificio. Las cifras no representan el número de viviendas adicionales adquiridas durante un período dado. Representan el número de viviendas construídas durante un período determinado más el número creado por transformaciones de edificios originalmente construídos durante la misma época, menos el número destruído en construcciones del período. Ocurren perdidas debido a demolición, fuego, inundación y desastre, y transformación a uso no residencial o a menos viviendas.

Condición y Facilidades

Condición y facilidades en combinación.—Ambos la condición de una vivienda y la clase de facilidades se consideran medidas de la calidad de viviendas. Estos ítemes se han combinado en categorías que representan varios niveles de calidad, empezando con lo más deseable y terminando con lo menos deseable. Dichas categorías comprensivas proveen un método más práctico para evaluar la calidad que lo sería cada ítem por separado. Las estadísticas de acuerdo con la combinación de condición y facilidades están limitadas a esas viviendas para las cuales se obtuvo información para todos los ítemes.

La categoría "With private toilet and bath" (con inodoro y baño privado) incluye esas viviendas con un inodoro de agua corriente y un baño o ducha dentro del edificio para el uso exclusivo de los ocupantes de la vivienda. "With running water, lacking private toilet, or bath" (con agua en tubería, pero sin inodoro de agua corriente privado o sin baño) incluye esas viviendas con agua en tubería en el edificio, pero sin inodoro de agua corriente privado o sin un baño o ducha privado. "No running water "(sin agua en tubería) incluye esas viviendas con agua en tubería fuera del edificio solamente y otras fuentes de agua, como una bomba.

En 1940, los datos sobre necesidad de reparaciones (condición) y las facilidades, no se presentaron en combinación.

Condición.—Para medir condición, se clasificaron las viviendas como "not dilapidated" (no deterioradas) y "dilapidated" (deterioradas). Una vivienda se anotó como deteriorada si las deficiencias, estado de deterioro o construcción original de la misma eran de tal naturaleza que no proveían protección adecuada contra los elementos y eran peligrosas para los ocupantes. Una vivienda se consideraba deteriorada si, debido a construcción originalmente deficiente o actual estado de deterioro, no cumplía con las normas mínimas de seguridad establecidas para viviendas y merece que se destruya o se reconstruya totalmente.

El enumerador determinó la condición de la vivienda a base de sus propias observaciones. Se le instruyó que juzgara la condición de las viviendas uniformemente, no importaba el vecindario. Se le facilitaron instrucciones detalladas y fotografías ilustrando los conceptos de deterioración y construcción originalmente deficiente.

The types of deficiencies used in determining condition relate to weather tightness, extent of disrepair, hazards to safety, and inadequate or makeshift construction. Deficiencies which could be revealed only by an engineering survey, or such deficiencies as inadequate light or ventilation, or the presence of dampness or infestation, were not included among the criteria for determining condition of a dwelling unit.

Specifically, a dwelling unit was to be reported as dilapidated if—

1. It had one or more critical deficiencies, as for example:

a. Holes, open cracks, rotted, loose, or missing materials over a considerable area of the foundation, outside walls, roof, or inside walls, floors, or ceilings.
b. Substantial sagging of floors, walls, or roof.
c. Extensive damage by storm, flood, or fire.

2. It had a combination of minor deficiencies which were present in sufficient number and extent to give evidence that the unit did not provide adequate shelter or protection against the elements or was physically unsafe. Examples of these deficiencies are—

a. Holes, open cracks, rotted, loose, or missing materials over a small area.
b. Rotted or loose window frames which are no longer rainproof or windproof.
c. Deep wear on doorsills, doorframes, outside or inside steps, or floors.
d. Broken, loose, or missing inside stair treads or risers, balusters, or railings.

3. It was of inadequate original construction. Examples of inadequate original construction are—

a. Makeshift walls.
b. Dirt floors.
c. Constructed on swampy land.
d. Lack of exterior doors and/or windows.

Although the enumerator was provided with detailed oral and written instructions and with visual aids, it was not possible to eliminate completely the element of judgment in the enumeration of this item. There is evidence that some enumerators obtained too large or too small a count of dilapidated units. Consequently, data on condition for small areas, which depend on the work of one or two enumerators, are subject to a wider margin of error than is to be expected for larger areas, where the data represent the returns made by several enumerators.

In the 1940 Census, "dilapidation" was not enumerated; the concept "needing major repairs" was used to provide information about the condition of housing. A dwelling unit was classified as "needing major repairs" when parts of the structure such as floors, roof, walls, or foundation required major repairs or replacements. A repair was "major" when its continued neglect would have seriously impaired the soundness of the structure and created a safety hazard to the residents. The training program for this item in 1940 did not provide any visual aids or detailed oral and written instructions.

The 1940 Census concept of "major repairs" was replaced by the concept of "dilapidation" for the 1950 Census at the recommendation of a Federal interagency committee on housing adequacy. After a lengthy investigation including field tests of several concepts, the committee reported that "major repairs" was not always a reliable index of housing quality. There was evidence that the enumerator tended to use the cost of the repair in judging between major and minor repairs. Further, "major repairs" measures only the condition of the structure, not the structural level nor the ability of the house to provide adequate shelter. For example, a new house, constructed so that it does not provide adequate protection against the elements, might not technically be in need of "major repairs." Likewise, a unit might have a number of minor deficiencies, none of which technically constitute a "major repair," but which, when combined indicate

Las deficiencias usadas para juzgar condición se relacionan con protección adecuada contra los elementos, estado de deterioro, o si son peligrosas para la salud y protección de los ocupantes, y construcción deficiente. No se incluyeron como criterio esas deficiencias que no se pueden observar sin un escrutinio técnico como falta de luz y ventilación, humedad, comején, o bolilla, etc.

Específicamente, una vivienda estaba deteriorada si tenía:

1. Defectos peligrosos (cualquiera de estos):

a. Huecos o grietas, materiales quebrados o sueltos, o falta de algunos en gran parte de la superficie del techo, de los pisos, y de las paredes exteriores e interiores.
b. Pisos, paredes o techo visiblemente desnivelados.
c. Daño extensivo causado por fuego, huracán o lluvias fuertes.

2. El conjunto de defectos menores no dejaba duda de que existía falta de protección contra los elementos, o era peligrosa. Ejemplos de dichos defectos son:

a. Huecos, materiales rajados, quebrados o sueltos en el techo, los pisos y las paredes en áreas pequeñas.
b. Marcos de ventanas y ventanas podridas.
c. Desgaste en los umbrales, marcos de puertas, peldaños interiores y exteriores o pisos.
d. Balaústres, peldaños o pasamanos interiores o exteriores sueltos o inseguros.

3. Era de construcción originalmente deficiente. Ejemplos de construcciones deficientes son:

a. Paredes y techos de cajas de madera, de paja, de yaguas o tablas viejas.
b. Piso de tierra.
c. Construída en terreno pantanoso.
d. Falta de puertas exteriores y/o ventanas.

Aunque se le facilitaron al enumerador instrucciones detalladas orales y escritas e ilustraciones, no fué posible eliminar completamente el elemento de juicio propio en la enumeración de este ítem. Hay evidencia de que algunos enumeradores obtuvieron recuentos muy altos o muy reducidos de las viviendas deterioradas. Así es que en las estadísticas de condición para las áreas pequeñas, el trabajo de uno o dos enumeradores, están sujetas a márgenes de error más amplios que las de areas más grandes donde los datos representan informes de varios enumeradores.

En el Censo de 1940, no se obtuvo información sobre "Dilapidation" (deterioración); se usó el concepto "necesitando reparaciones importantes" para obtener información sobre condición de la vivienda. Se consideró una vivienda como "necesitando reparaciones importantes" cuando parte de la construcción, como los pisos, los techos, las paredes o la base, necesitaban reparaciones o renovaciones. Una reparación era importante cuando su continua negligencia prejudicaría la seguridad de la construcción y crearía un peligro para los ocupantes. Durante el período de entrenamiento en 1940 no se presentaron ilustraciones o instrucciones orales o escritas detalladas para este ítem.

El concepto del Censo de 1940 de "reparaciones importantes" fué reemplazado en el Censo de 1950 por el concepto de "dilapidation" (deterioración) de acuerdo con la recomendación de un comite federal sobre lo que son viviendas adecuadas. Después de larga investigación incluyendo encuestas en el campo basada en varios conceptos, el comité decidió que "reparaciones importantes" no era siempre un indicio verdadero de calidad de la vivienda. Hubo evidencia que el enumerador usaba el costo de las reparaciones para juzgar si las reparaciones eran importantes o menores. Además, "reparaciones importantes" mide solamente la condición del edificio, y no provee información sobre el nivel estructural de la vivienda o si ofrece protección adecuada. Por ejemplo, una casa nueva, construída de tal manera que no provee protección adecuada contra los elementos, no necesitaria realmente reparaciones mayores en el sentido técnico. De la misma manera,

that the unit was inadequate. The committee concluded that the level of quality to be measured, fundamentally, was whether or not the dwelling unit was capable of providing adequate shelter or protection against the elements, and sufficient safeguards for the safety of the occupants. The committee concurred that the term "dilapidated" most accurately described the concept it had recommended for measurement.

No reliable data have been obtained to compare the relationship between the "major repairs" category and the "dilapidated" category. However, it is the opinion of a number of qualified housing economists that the 1950 concept of "dilapidation" will generally provide a smaller count of poor housing than the 1940 concept of "major repairs." The two terms differ significantly, and the 1940 and 1950 results on condition are not comparable.

Water supply.—A dwelling unit has "piped running water" if water is piped to it from a pressure or gravity system. "No piped running water" includes water from a hand pump or from a well or stream or where no piped running water is available. "Running water" is classified into (*a*) "municipal water system" and (*b*) "private cistern or well" depending on whether the source of the water is a public aqueduct or a privately owned cistern or well.

The 1950 data on piped running water were collected in terms of location inside or outside the structure, whereas the 1940 data distinguished between location inside or outside the dwelling unit. However, the 1950 count of units with "piped running water inside structure" may be considered comparable with the 1940 count of units with "running water in dwelling unit" in places where the number of units with running water outside the unit but inside the structure is insignificant.

Toilet facilities.—A dwelling unit is reported as having a flush toilet if the toilet is inside the structure and is operated by means of water piped to it. A flush toilet for exclusive use is differentiated from one that is shared.

Bathing facilities.—A dwelling unit has a bathtub or shower if either type of equipment, supplied with piped running water, is available inside the structure for the use of the occupants of the dwelling unit. An installed bathtub or shower located outside the structure was enumerated as "no bathtub or shower." Bathing facilities inside the structure for exclusive use are differentiated from facilities that are shared.

Exclusive or shared use.—Facilities are for exclusive use when the occupants of only one dwelling unit use them. If there are lodgers in the dwelling unit who also use the facilities, the facilities are still reported as for the exclusive use of occupants of the dwelling unit, provided that they are not used by occupants of another dwelling unit. Facilities are shared when occupants of two or more dwelling units use the same facilities. Also, facilities are shared if they would be used by the occupants of a unit now vacant, if that unit were occupied.

Inside the structure.—Facilities or equipment are considered "inside the structure" if they are located within the dwelling unit or elsewhere in the structure, such as in a common hallway, or in a room used by several dwelling units. Facilities or equipment on an open porch are considered to be outside the structure. Those located in an enclosed porch are considered to be inside the structure, even though it may be necessary to go outside the structure to reach them.

una vivienda puede tener varios defectos menores, ninguno de los cuales técnicamente sería una "reparación importante," pero harían combinados inadecuada. El comité decidió que el nivel de calidad fundamental que se debía medir era, si la vivienda proveía protección adecuada contra los elementos y abrigo para la seguridad de los ocupantes. El comité concurrió que el término que describía el concepto, que ellos recomendaban como medida, con más exactitud era "dilapidated" (deteriorado).

No se han obtenido datos confiables para comparar la relación entre la categoría "reparaciones importantes" y la categoría "dilapidated" (deteriorada). Sin embargo, es la opinión de varios economistas expertos en viviendas que el concepto de "dilapidation" (deterioración) del 1950 proporcionará un recuento menor de viviendas pobres que el concepto en 1940 de "reparaciones importantes." Los dos términos difieren significativamente, y los resultados para 1940 y 1950 no son comparables.

Suministro de agua.—Una vivienda tiene "piped running water" (agua en tubería) si le agua viene de un sistema de presión o gravedad. "No piped running water" (sin agua en tubería) incluye agua de una bomba o de un pozo o río o ninguna. "Running water" (agua corriente) se clasifica en (1) "municipal water system" (agua de acueducto municipal) y (2) "private cistern or well" (aljibe o pozo privado) si la fuente del agua es un acueducto público o un aljibe o pozo privado.

Las estadísticas sobre agua en tubería para 1950 se compilaron de acuerdo con la ubicación dentro o fuera del edificio, mientras que los datos para 1940 distinguen la ubicación dentro o fuera de la vivienda. Sin embargo, el recuento en 1950 de viviendas con "piped running water inside structure" (agua en tubería dentro del edificio) puede considerarse comparable con el recuento de viviendas con "agua corriente adentro" de 1940 en esos lugares donde el número de viviendas con agua en tubería fuera de la vivienda pero dentro del edificio es insignificante.

Servicio sanitario.—Una vivienda tiene un inodoro con agua corriente si el inodoro está dentro del edificio y se opera por medio de agua en tubería. Se diferencia entre un inodoro de agua corriente para uso exclusivo de un inodoro para uso común de varios viviendas.

Baño o ducha.—La vivienda tiene un baño o ducha si tiene cualquiera de los dos, con agua corriente en tubería, dentro del edificio para el uso de los ocupantes de la vivienda. Un baño o ducha fuera del edificio se enumeró como "sin baño o ducha." Se diferencian las viviendas con baños o duchas para uso exclusivo de esas para uso común de varias viviendas.

Uso exclusivo o para uso de varias viviendas.—Facilidades para el uso exclusivo de una vivienda son aquéllas utiliza das solamente por las personas que viven en ella. Si hay alojados en la vivienda que comparten las facilidades con la familia, se consideran las facilidades como para "uso exclusivo" siempre y cuando no se comparten con los ocupantes de otra vivienda. Cuando los ocupantes de dos o más viviendas comparten las mismas facilidades se considera que las facilidades son para el uso común de varias viviendas. También, las facilidades son de uso común cuando son compartidas por ocupantes de dos o más viviendas aún cuando una o más viviendas estén desocupadas por el momento.

Dentro del edificio.—Se consideraran que las facilidades o accesorios están "inside the structure" (dentro del edificio) si están instalados en la parte interior de la vivienda o del edificio, como por ejemplo, en un pasillo, o en un cuarto usado por varias unidades de vivienda. Si las facilidades o accesorios estában en un balcón o en el patio de la vivienda se consideran "fuera" del edificio. Esas facilidades instaladas en un balcón cerrado se consideran que están dentro del edificio, no importa si es necesario salir fuera del edificio para usarlas.

Exterior material.—Dwelling units are classified according to the exterior material as follows: (*a*) Wooden walls with metal roof, (*b*) wooden walls with roof of materials other than metal, (*c*) concrete walls, and (*d*) walls of any material other than wood or concrete. If a combination of material was used, the dwelling was considered to be constructed of the material used for the greater part of the exterior walls. Statistics are based on the number of dwelling units classified by the type of material used for the structure in which they are located rather than on the number of residential structures.

Equipment

Electric lighting.—A dwelling unit is reported as "with electric lights" if it is wired for electric lights, even though service may have been temporarily suspended at the time of enumeration.

Refrigeration equipment.—The principal refrigeration equipment available to the dwelling unit was reported, whether or not it was in use at the time of enumeration. "Mechanical" refrigeration includes any type of refrigerator operated by electricity, gas, kerosene, gasoline, or other source of power. "Ice" refrigeration includes a refrigerator, box, or chest cooled by ice supplied from an outside source.

Financial Characteristics

Contract monthly rent.—Contract monthly rent is the rent at the time of enumeration contracted for by the renter, regardless of whether it includes furniture, electricity, cooking fuel, water, or other services sometimes supplied. Monthly rent for vacant dwelling units is the monthly rent asked at the time of enumeration. Data are limited to nonfarm units; data for vacant units are further limited to not dilapidated units, for rent.

The contract monthly rent data for renter-occupied nonfarm units are considered roughly comparable for the 1950 and the 1940 Censuses, although in 1950 no dollar estimates were made for rent-free units, whereas in 1940 estimates made for rent-free units were included in the distribution of renter units. The data for vacant units are not comparable, however, because in 1940 rental amounts for all vacant units were presented, whereas in 1950 rent data for vacant units are limited to not dilapidated vacant units, for rent. Furthermore, in 1940, estimates of contract monthly rent were obtained for owner-occupied and for farm units, whereas in 1950 such data were not collected.

The median contract monthly rent of the dwelling units is the rent which divides the series into two equal parts, one-half of the units with rents higher than the median and the other half with rents lower than the median. In the computation of the median, the limits of the class intervals were assumed to stand at the midpoint of the 1-dollar interval between the end of one of the rent groups and the beginning of the next. For example, the limits of the interval designated $10 to $14 were assumed to be $9.50 and $14.50. The medians for vacant dwelling units were computed on the basis of the tabulation groups in full detail as shown in the tables for renter-occupied units.

Value of one-dwelling unit structures.—In 1950, owner-occupied dwelling units were classified according to ownership of land on which the structure was built, that is, (*a*) units where both the dwelling and the land were owned by the occupant, and (*b*) units where only the dwelling was owned by the occupant. For the category "Dwelling and land owned" the value represents the amount for which the owner-occupant estimates that the property including its land would sell under ordinary conditions and not at forced sale. For a vacant property, value is the sale price asked by the owner. For the category "Dwelling owned, land rented" the

Material exterior.—Las viviendas se clasifican según el material exterior como sigue: (1) Paredes de madera con techo de metal, (2) paredes de madera con techo de otro material que no sea metal, (3) paredes de concreto, y (4) paredes u otro material que no sea madera o concreto. Combinaciones de material se clasifican de acuerdo con el material que cubría la mayor parte del área exterior. Las estadísticas se basan en el número de viviendas clasificadas de acuerdo con la clase de material usado para el edificio en que están situadas y no en el número de edificios residenciales.

Accesorios

Luz eléctrica.—Se clasifica una vivienda como "with electric lights" (con alumbrado eléctrico) si tiene alumbrado eléctrico aunque el servicio estuviera suspendido temporalmente en la fecha de la enumeración.

Nevera o refrigerador.—Se anotó la facilidad principal de refrigeración en la vivienda, aunque no estuviera en uso en la fecha de la enumeración. Refrigeración "mechanical" (mecánica) incluye toda nevera que trabaja por medio de electricidad, de gas, gasolina, etc. Refrigeración "ice" (de hielo) incluye un refrigerador, o una nevera para la cual es necesario obtener hielo de otra fuente.

Valor y Alquiler

Alquiler mensual.—Alquiler mensual es la cantidad de dinero que el ocupante pagaba como alquiler mensual en la fecha de la enumeración; no importa si esta cantidad incluye muebles, electricidad y otros servicios. Alquiler mensual para las viviendas desocupadas es la cantidad que se pedía en la fecha de la enumeración. Las estadísticas se limitan a unidades no agrícolas; las estadísticas sobre viviendas desocupadas también se limitan a los viviendas no deterioradas para alquiler.

Se consideran las estadísticas sobre el alquiler mensual de viviendas alquiladas más o menos comparables para los Censos de 1950 y 1940, aunque en 1950 no se hicieron cálculos en dólares para las viviendas ocupadas sin pagar alquiler, mientras que en 1940 se incluyeron en las distribuciones de viviendas alquiladas un cálculo para viviendas ocupadas sin pagar alquiler. Los datos para viviendas desocupadas no son comparables, porque en 1940 se publicaron rentas mensuales para toda viviendas desocupadas, mientras que en 1950 los datos para viviendas desocupadas se limitan a viviendas desocupadas no deterioradas, para alquiler. Además, en 1940, se obtuvieron cálculos de alquiler mensual para las viviendas ocupadas por el dueño y para viviendas en fincas, mientras que en 1950 no se compilaron tales datos.

El valor mediano del alquiler mensual para viviendas es el alquiler que divide la serie en dos partes iguales, una mitad de las viviendas alquiladas con el alquiler más alto que la mediana y la otra mitad con alquileres menos que la mediana. En la computación de la mediana, los límites de los intervalos de las clases se asumieron en el punto medio del intervalo de 1-dolar entre la terminación de una categoría de renta y el comienzo de la proxíma. Por ejemplo, se asumieron que los límites del intervalo designado $10 a $14 eran $9.50 y $14.50. Las medianas para viviendas desocupadas se computaron a base de los grupos detallados en que se tabularon, tal como se presentan en las tablas para viviendas alquiladas.

Valor de edificios con una vivienda.—En 1950, se clasificaron las viviendas propiedad de los ocupantes de acuerdo con la tenencia del solar en la cual estaba construído el edificio, es decir, (*a*) vivienda y solar propiedad del ocupante, y (*b*) vivienda propiedad del ocupante, solar no propiedad del ocupante. Para la categoría, "Dwelling and land owned," (vivienda y solar propiedad del ocupante) el valor representa la cantidad que el dueño ocupante calcula que recibiría para la propiedad, incluyendo los terrenos, si se fuera a vender bajo condiciones normales, es decir que no sea una venta forzada. Para las viviendas desocupadas, el valor es

value represents the amount for which the owner-occupant estimates that the dwelling, not including the land, would sell under ordinary conditions. Value data are limited to nonfarm units in 1-dwelling-unit structures without business. For vacant units, data are further limited to structures for sale only.

In 1940, the value data were presented for owner-occupied units in both multi-dwelling-unit structures and 1-dwelling-unit structures. If the owner occupied one of the dwelling units in a two or more dwelling unit structure or if a part of the structure was used for business purposes, the value reported in 1940 represented only that portion occupied by the owner and his household. Tenure of land on which the dwelling was located was not obtained in 1940. No value data were obtained for vacant units in 1940. Thus, the data on value of owner-occupied units are not strictly comparable for the two censuses because of the differences in the types of units for which value was reported.

The median value of the dwelling units is the value which divides the series into two equal parts, one-half of the units with values higher than the median and the other half with values lower than the median. In computing the median, the limits of the class interval were assumed to stand at the beginning and end of the value group as shown in the tables.

Monthly contract land rental of owned dwelling.—For units classified as "Dwelling owned, land rented," the monthly contract land rental for the lot was reported. Data are limited to nonfarm owner-occupied units in 1-dwelling-unit structures without business.

The median was computed in the same manner as was median contract monthly rent for renter-occupied units.

RELIABILITY OF DATA

Users of data for the smaller areas should bear in mind that the data for such areas represent the work of a very small number of enumerators (often only one or two). The misinterpretation by an enumerator of the instructions for a particular item may, therefore, have an appreciable effect on the statistics for a very small community, even though it would have a negligible effect upon the figures for a large area.

el precio de venta que el dueño pide. Para la categoría "dwelling owned, land rented" (vivienda propiedad del ocupante, solar no propiedad del ocupante) el valor representa la cantidad que el dueño-ocupante de la vivienda calcula que recibiría por lo vivienda, sin el solar, si la fuera a vender bajo condiciones normales. Los datos sobre valor están limitados a viviendas no agrícolas en edificios de una vivienda sin negocio. Para las viviendas desocupadas, los datos también se limitan a edificios para venta solamente.

En 1940, se presentaron estadísticas sobre valor para viviendas ocupadas por los dueños en edificios de más de una vivienda y para edificios de una vivienda. Si el dueño ocupaba una vivienda en un edificio de 2 o más viviendas o si usaba parte del edificio para propósitos de negocio, el valor en 1940 representaba solamente esa parte ocupada por el dueño y su familia. En 1940, no se obtuvo la tenencia del solar en que estaba situada la vivienda. En 1940, no se obtuvieron datos sobre valor para viviendas desocupadas. Así es que, las estadísticas para los dos censos sobre valor de viviendas propiedad del ocupante no son estrictamente comparables, debido a los diferentes tipos de viviendas para las cuales se obtuvieron valores.

El valor mediano de las viviendas es el valor que divide la serie en dos partes iguales, una mitad de las viviendas con valores más altos que el valor mediano y la otra mitad con valores más bajos que la mediana. Al computar la mediana, los límites de los intervalos de clase se asumieron caer al comienzo y al fin del grupo de valor tal como se presentan en las tablas.

Alquiler mensual del solar para viviendas propiedad del ocupante, solar no propiedad del ocupante.—Para las viviendas clasificadas como "dwelling owned, land rented," (vivienda propiedad del ocupante, solar no propiedad del ocupante) se informó el alquiler mensual del solar. Los datos se límitan a viviendas no agrícolas propiedades de los ocupantes en edificios de una vivienda sin negocio.

La mediana se computó de la misma manera que el alquiler mediano para viviendas alquiladas.

CONFIABLIDAD DE LOS DATOS

Las personas que usan los datos para las áreas pequeñas deben tener en mente que los datos para dichas áreas representan el trabajo de un número muy pequeño de enumeradores (frecuentemente uno o dos). La mal interpretación por un enumerador de las instrucciones para un ítem en particular, puede tener, por lo tanto, un efecto apreciable sobre las estadísticas de una comunidad muy pequeña, aún cuando el efecto en los datos de un área grande sería insignificante.
